USER MANUAL

Shree Shyam Book Mobile App

Keep your match GT and session book live on your phone's home screen — updating with no delay.

Install & setup guide • Version 1.7

1 Install the app

1 Download

Open the download link your book shared with you and download **ShreeShyamBook.apk**. If it arrives as a **.zip**, long-press it and choose **Extract** to get the **.apk** file inside.

2 Allow & install

Tap the **.apk** file. The first time, Android asks permission to install from this source — tap **Settings**, turn on **"Allow from this source"**, press back, then tap **Install**.

3 Open it

Open **Shree Shyam Book** from your apps. You'll see the login screen.

> **Only install the file we give you.** Don't install copies from anyone else — your book and data stay private to your login.

2 Log in

Enter the **username** and **password** your book gave you (for example **owner**) and tap **Log in**. You don't need an email address — just the username.

> Each user has their own login and sees only their own book. Keep your password private.

3 Add the widgets to your home screen

In the app, scroll to **“Add widgets to home screen”** and tap **“Add both widgets.”** Confirm the pop-up for each one — your two tiles appear on the home screen. (You can also add just one with **“Match GT only”** or **“Session only.”**)

Match GT widget

ind v aus (20-20)			
	ind	aus	DRW
GT	2,000	-25,000	-25,000

Team names across the top, the GT for each underneath. **Blue = plus**, **pink = minus**.

Session widget

Session	
RUN	NP
63	-300
64	-300
65	700
66	700

The run ladder automatically centres on your latest sauda's run (shown highlighted), so you always see the book around the live run.

> Tip: drag a widget's edges to resize it. Make the Match tile short (about two rows) and the Session tile taller to see more runs.

4 Live mode (real-time)

Live mode is **always on** while you're logged in — the moment a bet changes, your widgets update with **no delay**. The first time, allow the **notification** when asked; a small "Shree Shyam Book — Live" notice shows the current GT and session.

You can turn it off anytime with the **"Keep live mode always on"** switch in Settings.

5 Everyday use

- **Refresh now:** tap any widget to refresh it instantly.
- **Dark theme:** Settings → turn on **"Dark widget theme."**
- **Big numbers:** large amounts shrink automatically to fit their box.
- **Show/hide:** choose which widgets to show from Settings, then **Save & refresh widgets.**

6 If something's not right

- **Widget looks old after an update:** remove it from the home screen and add it again.
- **"Log in to the app":** open the app and sign in; the widget will fill in.
- **No live updates:** open the app once so live mode starts, and allow notifications.
- **Can't install:** enable "Allow from this source" for your file manager or browser.

> Need help? Contact your book — they can reset your password or re-share the app.
